

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-30 (Canceled).

Claim 31 (Currently Amended): A system for communicating over an open computer network, comprising:

a management unit ~~distributing~~ configured to distribute a plurality of data from a database to a plurality of remote users,

a first terminal associated with a first user and configured to access a first information site, said first information site being maintained independently from the management unit, and configured to acquire a client program from the management unit;

said client program ~~reads~~ being configured to read an internet address of the first information site in a web crawler of said first terminal;

said client program ~~sends~~ being configured to send a message to said management unit, said message includes the internet address of the first information site;

said management unit is configured to access the database and determine a collection of ~~web-pages~~ related information sites containing related information associated with the internet address of the first information site;

said management unit is configured to identify a second user at a second terminal, having the client program, said second user accessing at least one other related information site ~~of the web-pages information sites~~ of the collection of said ~~web-pages~~ related information sites containing related information associated with the internet address of the first information site and said management unit is configured to receive an IP address of the second terminal;

said first terminal is further configured to receive the IP address of the second terminal from the management unit and is configured to conduct a communication from the first user to the second user based on the received IP address by way of exchange of respective IP addresses between the first and second terminals,

wherein said other related information site is part of a same collection as the first information site, [[and]]

the collection of related information sites include at least one of identical information sites, information sites that are stored in the same place, information sites that have a same author, information sites that have a same specialty, and information sites that have a same publisher.

Claim 32 (Currently Amended): The system as claimed in claim 31, wherein at least one of ~~either~~ prepared [[or]] and not prepared meetings are established on any website where users of the terminals do not need to search for special meeting places, said special places including at least a chat room.

Claim 33 (Previously Presented): The system as claimed in claim 31, wherein said communication between the first terminal and another terminal is a direct communication.

Claim 34 (Previously Presented): The system as claimed in claim 31, wherein said direct communication is one of written and oral dialogue in real time.

Claim 35 (Previously Presented): The system as claimed in claim 31, wherein said communication between the first terminal and another terminal includes virtual meetings.

Claim 36 (Previously Presented): The system as claimed in claim 35, wherein said communication between the first terminal and another terminal includes making files accessible to all participants in said virtual meeting.

Claim 37 (Currently amended): The system as claimed in claim 31, wherein said communication between the first terminal and another terminal includes distribution of an address information, and a picture of users of terminals.

Claim 38 (Currently Amended): The system as claimed in claim 31, wherein said open computer network is Internet or other network, and the at least one other related information site includes at least one web page, and
wherein said other network includes at least an intranet.

Claim 39 (Previously Presented): The system as claimed in claim 38, wherein said communication between said first terminal and another terminal is created between visitors to a same web page, or to a web page that is included in an identified amount of web pages.

Claim 40 (Previously Presented): The system as claimed in claim 39, wherein said identified amount of web pages include at least one of,
web pages related to persons who have a common interest,
web pages stored at a same server,
web pages stored at a same group of servers,
web pages dealing with a same specialty,
web pages belonging to a same organization, and
web pages having a same publisher, author, or constructor.

Claim 41 (Previously Presented): The system as claimed in claim 38, wherein said communication between the first terminal and another terminal is allowed on any web page.

Claim 42 (Previously Presented): The system as claimed in claim 38, wherein a current IP-address for each terminal is utilized to establish communication.

Claim 43 (Previously Presented): The system as claimed in claim 39, wherein said database is configured to store information about users and information regarding appointment of said identified amount of web pages.

Claim 44 (Previously Presented): The system as claimed in claim 31, wherein resources for the first terminal, in addition to standard applications to create access to information, are loaded by the open computer network and installed at the first terminal.

Claim 45 (Previously Presented): The system as claimed in claim 31, wherein users can register the information comprising:

- a picture of the user;
- identity information including the user name or organizational affiliation;
- address information, including an address to establish communication; and
- biographical data.

Claim 46 (Previously Presented): The system as claimed in claim 39, wherein said virtual meetings include at least one of:

- chatting,

communication of files,
management of files in common,
access rights to communicated files and files in common,
access to address information of the participants in the meeting, and
showing of pictures of participants of the meeting.

Claim 47 (Currently Amended): A method of creating virtual meetings in an open computer network between a first terminal associated with a first user and another terminal accessing ~~[[a]]~~ an other related information site, the method comprising:

accessing a first information site, maintained independently from a management unit,
from a first terminal and acquiring a client program from ~~[[a]]~~ the management unit, ~~said~~
~~client program reads~~

reading an internet address of the first information site in a web crawler of the first
terminal,

sending a message to said management unit, said message including the internet
address of the first information site,

accessing a database and determining a collection of ~~web pages~~ related information
sites containing related information associated with the internet address of the first
information site,

receiving an IP address of ~~[[a]]~~ the second user from the management unit at a
second terminal accessing at least one other related information site ~~of the web pages~~
of the collection of related information sites,

establishing communications from the first user to the second user by way of
exchange of respective IP addresses between the first and second terminals,

wherein the collection of related information sites include at least one of identical information sites, information ~~sties~~ sites that are stored in the same place, information sites that have a same author, information sites that have a same specialty, and information sites that have a same publisher.

Claim 48 (Previously Presented): The method as claimed in claim 47, wherein said virtual meetings are established independent of a location of participants of the virtual meeting or address in the network.

Claim 49 (Previously Presented): The method as claimed in claim 47, wherein participants of said virtual meeting are given,

information about identities of other participants, including at least one of a name, or an organizational affiliation, and

stored picture or direct transmission of moving picture.

Claim 50 (Previously Presented): The method as claimed in claim 47, wherein participants of said virtual meeting are given information about an address of other participants.

Claim 51 (Previously Presented): The method as claimed in claim 47, wherein participants of said virtual meeting can carry on one of a written and oral conversation.

Claim 52 (Previously Presented): The method as claimed in claim 47, wherein files can be opened for participants at said virtual meeting.

Claim 53 (Previously Presented): The method as claimed in claim 47, wherein participants of said virtual meeting can make files and documents accessible to other participants at said virtual meeting.

Claim 54 (Previously Presented): The method as claimed in claim 47, wherein said open computer network is Internet or other network.

Claim 55 (Canceled).

Claim 56 (Previously Presented): The method as claimed in claim 54, wherein said virtual meetings:

are prepared or not prepared; and

are established between visitors to web pages that are located within the same world, where a world is an amount of web pages that persons who have interests in common can be expected to visit.

Claim 57 (Currently Amended): The method as claimed in claim 56, wherein ~~modifications~~ none of web pages ~~the related information sites,~~ within the collection of ~~web pages~~ related information sites, are modified by said method, ~~or of and~~ none of at least one web servers server, from where said ~~web pages~~ related information sites are loaded to establish virtual meetings, are ~~not needed~~ modified by said method.

Claim 58 (Previously Presented): The method as claimed in claim 56, wherein web pages within a same world are either located to a same server, to a same node, deal with a same specialty, have a same author, have a same publisher, or belong to a same organization.

Claim 59 (Previously Presented): The method as claimed in claim 54, wherein a support staff, or selling staff, of a company can see who is visiting the web site of the company and can communicate directly with these visitors.

Claim 60 (Previously Presented): The method as claimed in claims 54, wherein a current IP-address of each participant of the virtual meeting is utilized to establish communication between participants of the meeting.

Claim 61 (New): The system as claimed in claim 1, wherein none of the related information sites, within the collection of related information sites, are modified by said system, and

none of at least one web server, from where said related information sites are loaded to establish virtual meetings, are modified by said system.
